

### HOT MELT GLUE APPLICATOR FOR CARTONS & PACKS

Our table top gluing equipment is extremely compact and very easy to use. It's really flexible as it can easily handle both cartons and also multipacks by adding a simple tooling at the front. It can also adapt to different carton and pack dimensions and configurations, with only a simple and quick format change.

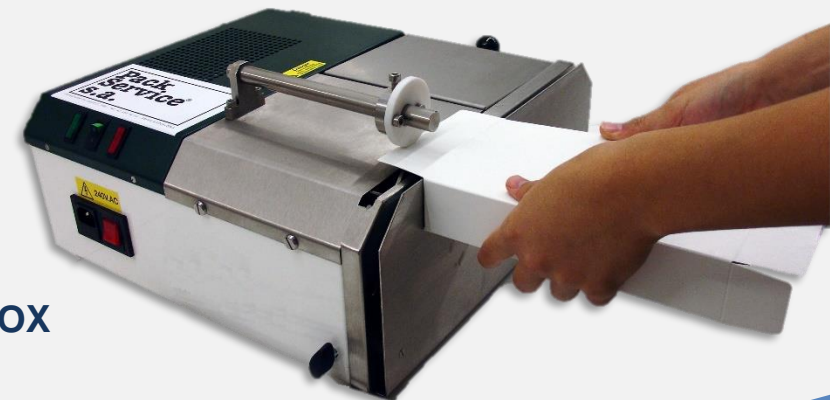

Thanks to its simplicity and low cost, this equipment is adequate for both small and big companies. Its flexibility makes it the most versatile pack gluer available in the market.

It can also be useful as auxiliary equipment for working tips, limited offers, special deals or as backup equipment to avoid production stops for maintenance.

The **HANDY BOX** version is perfect for cartons, while our **HANDY PACK** version is designed for multipacks. You can have the maximum flexibility in only one equipment.
